# Ventilation Strip Soffit Ventilation

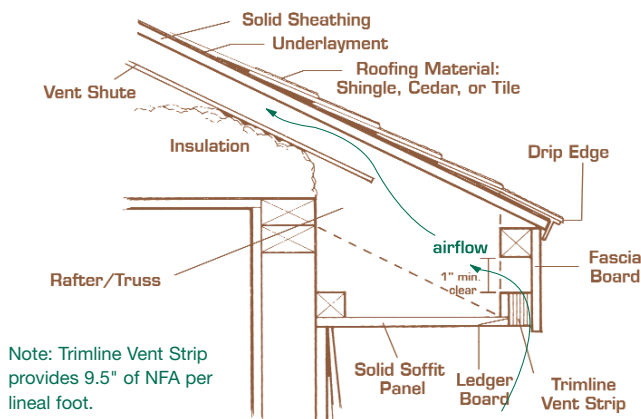

Trimline Ventilation Strips are soffit vents that provide even and continuous air movement along the underside of roof sheathing. Trimline Ventilation Strips help achieve a balanced ventilation system by providing the required air intake at the eaves. This air intake provides uninterrupted air flow, allowing heat and moisture to be exhausted at the peak of the roof.

Trimline Ventilation Strips are adaptable to a variety of roof applications and are easy to install. When used with Trimline Shingle Over Ridge Vents, you are assured of the most efficient and attractive ventilation system available.

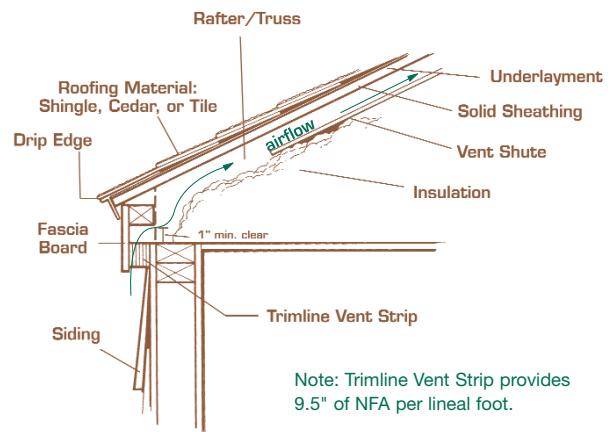

- 9.5" Net Free Ventilation Area\*  
(\*Per Lineal Foot)
- 4' Lengths
- 1" Width x 1-1/2" Height
- 24-4' Strips Per Carton (96 Lineal Feet)

## Wide Overhang Soffit Application

Note: Trimline Vent Strip provides 9.5" of NFA per lineal foot.

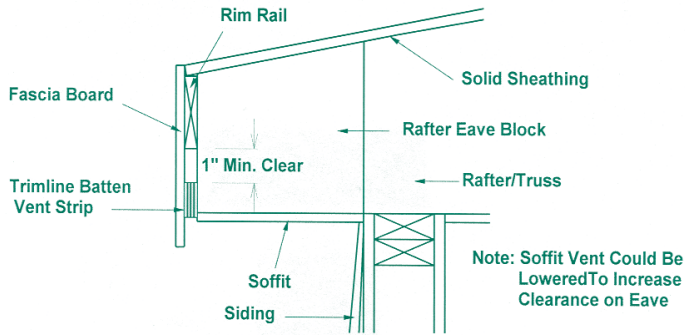

## Narrow Overhang Soffit Application

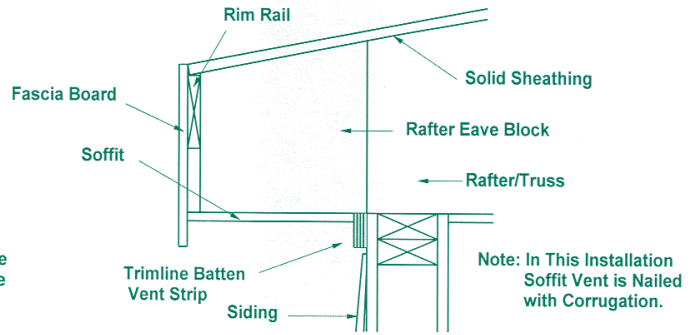

Note: Trimline Vent Strip provides 9.5" of NFA per lineal foot.
