

Lite Pipe *KnuckleHead* Assembly

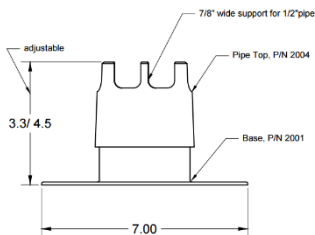

DESCRIPTION

Lite Pipe *KnuckleHeads* are light weight adjustable pipe supports manufactured from highly durable nylon material.

Sturdy: Lite Pipe *KnuckleHead* Assembly minimizes damage by rain, wind, ice, flying debris, vandalism or seismic events. *KnuckleHeads* are engineered to be adhered with super adhesive M-1® which creates a superior bond. Applied to the Base, M-1® adheres *KnuckleHeads* to the roofing membrane, and keeps water and dirt from attacking the roofing membrane.

Durable: Resistant to all extreme weather conditions.

Adjustable: Unique design allows adjustable height (of 3.3" to 4.5"), eliminating the need for a riser. *KnuckleHeads* accommodate height changes and can be easily lowered or elevated.

PROTECTING YOUR INVESTMENT

Loose-laid wood blocks commonly used as support for pipes eventually deteriorate and rot because of weather conditions or bacterial attack.

Using **Lite Pipe *KnuckleHead* Assembly** will keep your pipes, conduit, walkways and equipment high, safe and dry. Our supports will never rot or deteriorate because of their tough molded nylon composition.

*The difference between using wood blocks and Lite Pipe *KnuckleHead* Assembly. *KnuckleHead* replaces wood supports.*

Lite Pipe *KnuckleHead* Assembly fits a single 1" pipe in a large channel or two 1/2" pipes in small channels.
