- Can be used for fall protection
- Complies with OSHA regulations
- #12055 Posts are Interchangeable with all Acro Guardrail Systems
- Powder coated safety yellow
- Made in America

In 2012 Acro introduced the Vertical Guard Rail system model 12045 which is designed for fall protection on low pitch roofs, including masonry parapet walls. This unique system is designed to be anchored on the outside of a parapet wall so that work can be done to the decking and cap without interference from the fall protection system. The 12045's durability and versatility also makes it ideal for temporary guardrailing around most openings or open edges (skylights, stairwells, elevator shafts, etc). 2 x 4 construction grade lumber is used for cross rails.
