

How To Select A Tear-Off Spade

1st Choose A Handle

Wood - The standard of most tools manufactured, select #1 grade Ash and Hickory are used.

Steel - A dependable handle at a reasonable price, heavier than wood this steel handle is made of 1" Schedule 40 stock.

Fiberglass - Quickly gaining popularity, our unique fiberglass handle has a **SOLID** fiberglass core which has a polymer cover.

16-8-4 - Designed to limit the bending of the users back allowing for a more productive work day, made of 1" Schedule 40 stock.

2nd Choose A Heel

1 This design is the Industry Standard, although standard in its dimensions, it is mig welded for superior strength. This heel is made with an 11 gauge steel plate, measuring 3" x 10 1/2".

2 This is the Western Pattern developed for the roofing markets of California and the Western United States. Made with an 11 gauge steel plate, measuring 3" x 9 1/2" formed to the back of the spade. This heel has no bends and creates no lift.

3 This heel was designed for dependability, and has become our most popular heel of choice. Made with an 11 gauge steel plate, measuring 6" x 11", this heel covers and reinforces nearly 80% of the spade.

4 This is one of the simplest in design, but has become popular in numerous roofing markets in the Midwest and Eastern United States. Made with a 1" x 6" standard pipe center welded on the spade. Also available at the top.

5 This new and patented heel design is unlike any other, it actually rolls, reducing friction and resistance between the spade and the roof. Made with an 1 1/4" standard pipe suspended on a steel core.

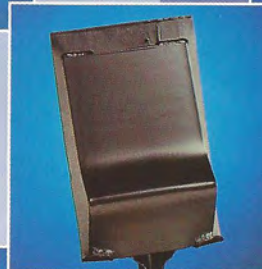

NOTE: The end of the part # will end with the heel #. Example 1107(3)
